# Case Study Agent

Find existing work, adapt selected slides and create new case studies — all in one place.

**Open the app → atomized-case-study-agent.streamlit.app**

**TRY A SEARCH**

Find AI-generated films for a hospitality brand.

## 01 Add presentations

Upload an approved **.pptx** file in **Import presentations** and select **Parse and save decks**. Existing library cases can be searched straight away.

## 02 Find relevant work

Describe your brief, including must-haves or alternatives. Start with **High Match**; expand **Partial Match** and **Matching evidence** to check gaps.

## 03 Select & refine

Select cases, then open **Selected cases**. Drag to reorder or remove slides. Use **Editing request** to revise text, preview it and **Apply changes**.

## 04 Export your deck

Click **Generate PPTX**, then **Download PPTX**. Your editable deck follows the selected order and includes the company template. Generate again after edits.

## 05 Create a new case

Describe a project in **Create case**. Refine the draft, add up to four images and an optional link, then export one editable slide. Reopen saved drafts with **History**.

## 06 Browse & review

Use **All cases** to browse the library and **Needs Review** to complete missing metadata. Missing or unknown information remains visible for review.

**Before sharing:** Check the wording and downloaded deck in PowerPoint. **Confirmed** means metadata is complete; it does not independently verify AI inferences.
